SPECIAL SUPPLEMENT SUNDAY 5 NOVEMBER 2017
Neonatal & Pediatric Care
The Department of Pediatrics and Neonatology at Aster Hospital provides comprehensive, world-class, pediatric care. We provide family centered patient care and a healing environment to sick babies. The department has a faculty of highly skilled and experienced pediatricians dedicated to the care of children, from the tiniest premature infant to the critically ill child. Assisted by a team of well qualified, experienced and specially trained nurses, support staff & full - fledged NICU our 24x7 pediatric emergency department is all set to bring back the smile to your child.

Emergency Care at its Best
The Department of Emergency Medicine at Aster Hospital combines technology and unmatched medical expertise to provide emergency care with utmost efficiency. Capable of handling all emergencies, the emergency care team is available 24/7.

A full-fledged facility with state-of-the-art clinical support, the team of trained and experienced doctors, paramedics and nurses here have the facilities at hand to extend immediate medical care to critically ill or injured patients. Designed to create a private, comfortable and calming ambience, the beds in the treatment area are well separated and curtained.

We provide round the clock management of medical, surgical, pediatric and neonatal, specialized attention for gynecology emergencies, care for fractures and dislocations, 24 / 7 MRI, radiology and laboratory service.

At every stage of life
General Internal Medicine provides diagnosis & treatment for a wide range of illness & lifestyle diseases (including diabetes) in adults. We promote prevention of illness & strive to maintain a rich quality of life. With a state of art ICU, treatment facilities and trained personnel; we provide the best in therapeutic & diagnostic technology with a caring attitude.

General Medicine
Movement is Life...
A strong musculo-skeletal system is the key to a satisfied life. Hence proper care with early detection and treatment of any bone and joint condition is very important. Therefore any injury is to be assessed by a doctor for better outcome.

Live your BEST Life..
There is no time like the present to start thinking about your gastrointestinal health. Keeping up with your GI health is fairly simple and can substantially reduce your risk of developing diseases of the digestive system.

Get it Clear..
Urologic diseases describe a wide variety of conditions, all related to kidneys, bladder and external genitalia. Aster Hospital, we deal with renal stones, infertility, erectile dysfunction and sexually transmitted diseases. We are equipped with endoscopic facilities, lithotripsy and minimally invasive procedures.

Hands that Care
The General Surgery department at Aster Hospital will provide consultation and surgery on medical conditions involving the endocrine system, gastrointestinal tract, genito-urinary system, breasts, colon and rectum (anal, Cups and fissures). The specialty works closely with other specialists involved in patient care to diagnose and provide timely surgical interventions for complex conditions. The department is equipped with 2D & 3D laparoscopic tower to conduct simple and complex laparoscopic surgeries.

The unit provides advanced laparoscopic surgery to treat diseases such as gallstones, hernia (inguinal, umbilical, ventral), appendicitis, intestinal and colorectal tumors. Minimally invasive procedures help with early mobilization, less recovery time and a faster return to work.

Mother and Baby Care
At Aster Hospital we have equipped our Mother and Baby Unit with the care, awareness and support services to best understand your pregnancy and prepare you better to welcome your little bundle of joy.

The Department of Obstetrics and Gynecology at Aster Hospital is a world class multidisciplinary unit that provides high risk pregnancy care, delivery suite and operative delivery for obstetric patients. The team provides medical and surgical (open, laparoscopic, hysteroscopic) treatment for various Gynecological diseases like PCOD, menstrual disorders, fibroids, endometriosis, vaginal prolapse, family planning procedures and others.
